**ParkHub Switches to
Codefresh for a
*Complete Docker-Native
CI Solution***

 **codefresh**

"Our app has always been on Docker, and we wanted our CI to match."

Parkhub uses Docker and wanted an easy-to-use CI to match

ParkHub helps parking operations boost revenue, cut costs, and wow guests with fast, reliable, and easy-to-use technology. With a team of 40 people, including 15 developers, their mobile point of sale app *Prime* is split between iOS and Full Stack. Their main application has always been on Docker with a microservice architecture. When looking for a continuous integration (CI) solution, ParkHub wanted something that would work nicely with their Dockerized application. When they discovered Codefresh's Docker native features, it was a perfect match!

COMPANY

Helping parking operations boost revenue, cut costs, and wow guests with fast, reliable, and easy-to-use technology.

INDUSTRY

Parking technology.

TECHNOLOGIES

Docker and Codefresh.

For any organization who has adopted Docker, this is a common story. Once ParkHub started providing standard images for MySQL, they also found they could containerize everything and completely eliminate variance between all the developer machines.

Enter Codefresh!

After trying several different CIs, ParkHub switched to Codefresh. They were immediately won over by its "ease of use" compared to competitors. Having a CI that plays nicely with Docker has helped ParkHub automate their processes and ship code much faster. "We are really happy with Codefresh's Docker multi-stage support" says Daniel Olivares, Full-Stack Developer at ParkHub, "and we're happy to have found a Docker-native CI."

"We had been using [a competitor] before, and were attracted to Codefresh being a Docker native solution."

We've seen many companies significantly cut down the time of their builds thanks to Codefresh's Docker-native caching capabilities. [Start your free trial](#), and see how much faster you could be building today!

Codefresh is a next-generation enterprise software delivery platform for Cloud-native applications. We help you automate your GitOps workflows and advanced deployments such as Canary and Blue/Green and are the premium Argo enterprise solution. DevOps teams from GoodRx, Monday.com, Deloitte, and more depend on Codefresh to deploy their software in a safe and scalable manner. Codefresh can support any pipeline end-to-end.
