Agenda

- Codefresh and Lightstep
- CI/CD and Observability
- Demo: Detect, Debug, Deploy
- Summary

Codefresh

The 1st container-native CI/CD Platform for Microservices

Container-native

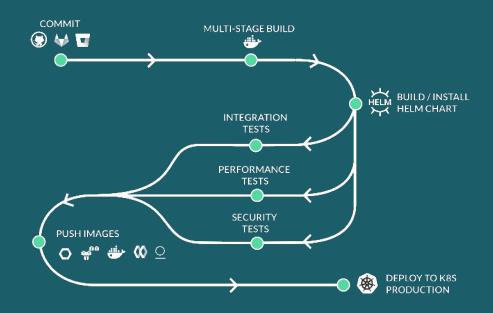

Intuitive & Robust

Enterprise Ready

Flexible Delivery

Observability with context

- Analyze 100% of requests and scale
- Automatic deployment regression detection
- Aggregate trace analysis
- Real-time and effective root cause analysis
- Alerting with Context
- Easy Setup with no vendor lock-in

Compare Operations (3) Avarage critical path latency per operation				
Operation	Baseline	→ Regression	Change	
write-cache Inventory	84.5ms	333ms	+268ms	
database-update inventory	38.5ms	33.4ms	-5.2ms	
opdate-inventory inventory	18ms	16.9ms	-1.1ms	
set mercaphod	5.2ms	5,22ms	+28µs	
UPDATE inventory-clo	4.6ms	3.47ms	-1.1ms	

Avarage critical path latency per operation				
Operation	Baseline	→ Regression	Change	
write-cache Inventory	64.5ms	333ms	+2.88ms	
database-update inventory	38.5ms	33.4ms	-5.2ms	
update-inventory inventory	18ms	16.9ms	-1.1ms	
set mericached	5.2ms	5.22ms	+28µs	
UPDATE inventory-do	4.6ms	3.47ms	-1.1ms	

Average critical path latency per operation				
Operation	Baseline	→ Regression	Change	
write-cache Inventory	84.5ms	333ms	+268mi	
database-update inventory	38.5ms	33.4ms	-5.2ms	
update-inventory inventory	18ms	16.9ms	-1.1ms	
set merocachad	5.2ms	5.22ms	+28µs	
UPDATE inventory-do	4.6ms	3.47ms	-1.1ma	

Compare Operations ① Average critical path latency per operation				
write-cache Inventory	84.5ms	333ms	+2/88ms	
database-update inventory	38.5ms	33.4ms	-5.2ms	
update-inventory inventory	18ms	16,9ms	-1.1ms	
set mencached	5.2ms	5.22ms	+28µs	
UPDATE inventory-clo	4.6ms	3.47mg	-1.1ma	

Observability is the process and practice of understanding your system.

Monitoring vs. Observability

Monitoring, as a discipline, requires you to predefine *normal* and then freeze it, with ruthless efficiency, suborning agility and humanity and adaptiveness in the sake of producing a steadystate system.

THENEWSTACK

There's too many unknowns in modern software to just throw together some dashboards and call it a day.

Think about the things you might need or want to know...

- "Why does a particular type of user account have worse response times?"
- "What's correlated with this particular failure?"
- "When did this error start occuring?"

CI/CD and Observability

- CI/CD speeds up your development velocity, but this velocity comes with tradeoffs.
- How do you know that your changes are improving performance, or resolving a performance issue?
- You need observability tools to measure and understand your system.

Instrumenting for Observability

- You need to add instrumentation to your service code to emit telemetry data.
- OpenTelemetry (https://opentelemetry.io) is a vendor-neutral telemetry API and SDK

Setting Up...

- We have a Kubernetes cluster set up already.
- Our sample application has a preconfigured Helm chart, and we've already deployed a version of the application.
- Let's assume we want to release a new version of our application...

Demo Detect, Debug, Deploy

Summary

- Codefresh makes it easy to continuously release and rollback deployments of your services.
- Lightstep is the best way to quickly and accurately understand your service health, and know when you need to rollback - or give you confidence that everything is OK.
