Business Problem

The Business Problem

How can we support a growing engineering team?

1 **Secrets Outside SCM**

Developers had to go to GUIs to manage secrets then connect back to apps

2 **No Pipelines as Code**

All pipelines were managed through a GUI; no way to test changes on a branch

3 **No Multi-process Support**

Current tool did not gel well with 12 factor app model

4 **No Extensibility**

We can’t wait for the vendor to support us because we can move 10x faster

Where We Started

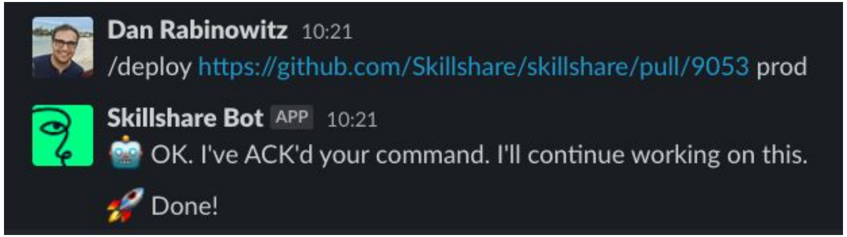
A short history lesson

T-Zero

- No unified deployment pipelines
- No pre-flight checks or smoke tests
- Every service is different
- No standard way to rollback prod

T-1: Unified CD

PIck a deploy tool; standardized k8s manifests; deploy through chatops



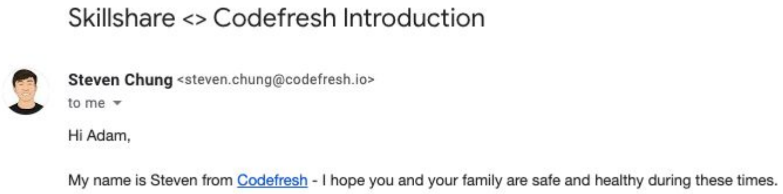
Dan Rabinowitz 10:21
/deploy https://github.com/Skillshare/skillshare/pull/9053 prod

Skillshare Bot APP 10:21
🤖 OK. I've ACK'd your command. I'll continue working on this.

🚀 Done!

T-2: One Year Later

We're stable but bumping up against those problems. It's clear we need a different tool, but what?



Skillshare <> Codefresh Introduction

Steven Chung <steven.chung@codefresh.io>
to me

Hi Adam,

My name is Steven from Codefresh - I hope you and your family are safe and healthy during these times.

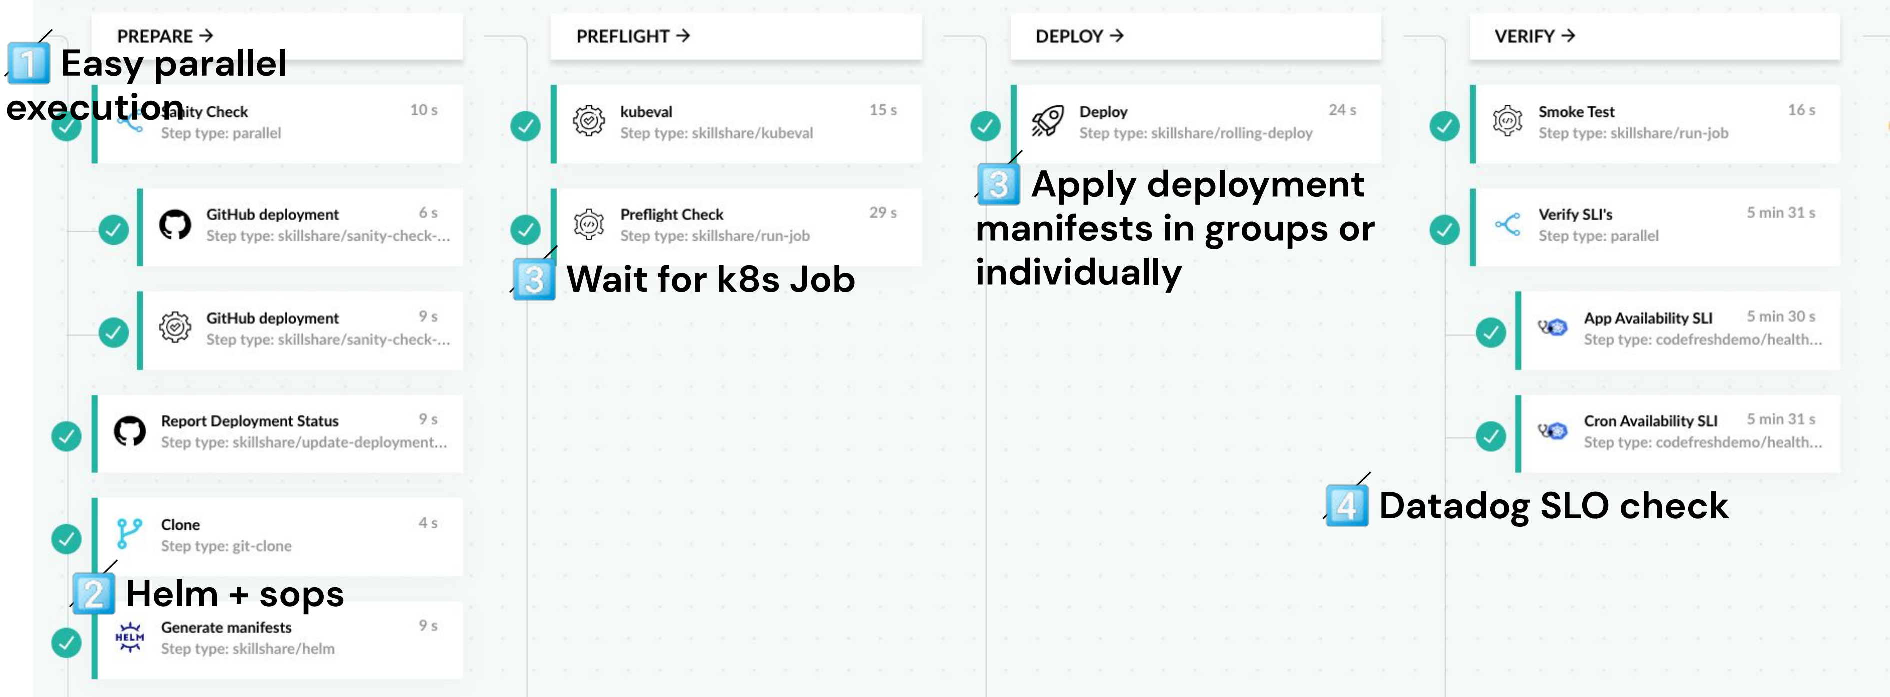
T-3: Meet Codefresh

Demo looks like it will solve all our problems, but we need proof.

🚀 Onward to a PoC

Proove support for our current and next requirements

The Proof-of-Concept Pipeline



PREPARE →

- Sanity Check — Step type: parallel — 10 s

Really had to zoom out for this one! 🔎

Success 🏁🏁

OK, let's rock!

1

Secrets with sops

👏 secrets managed in code

2

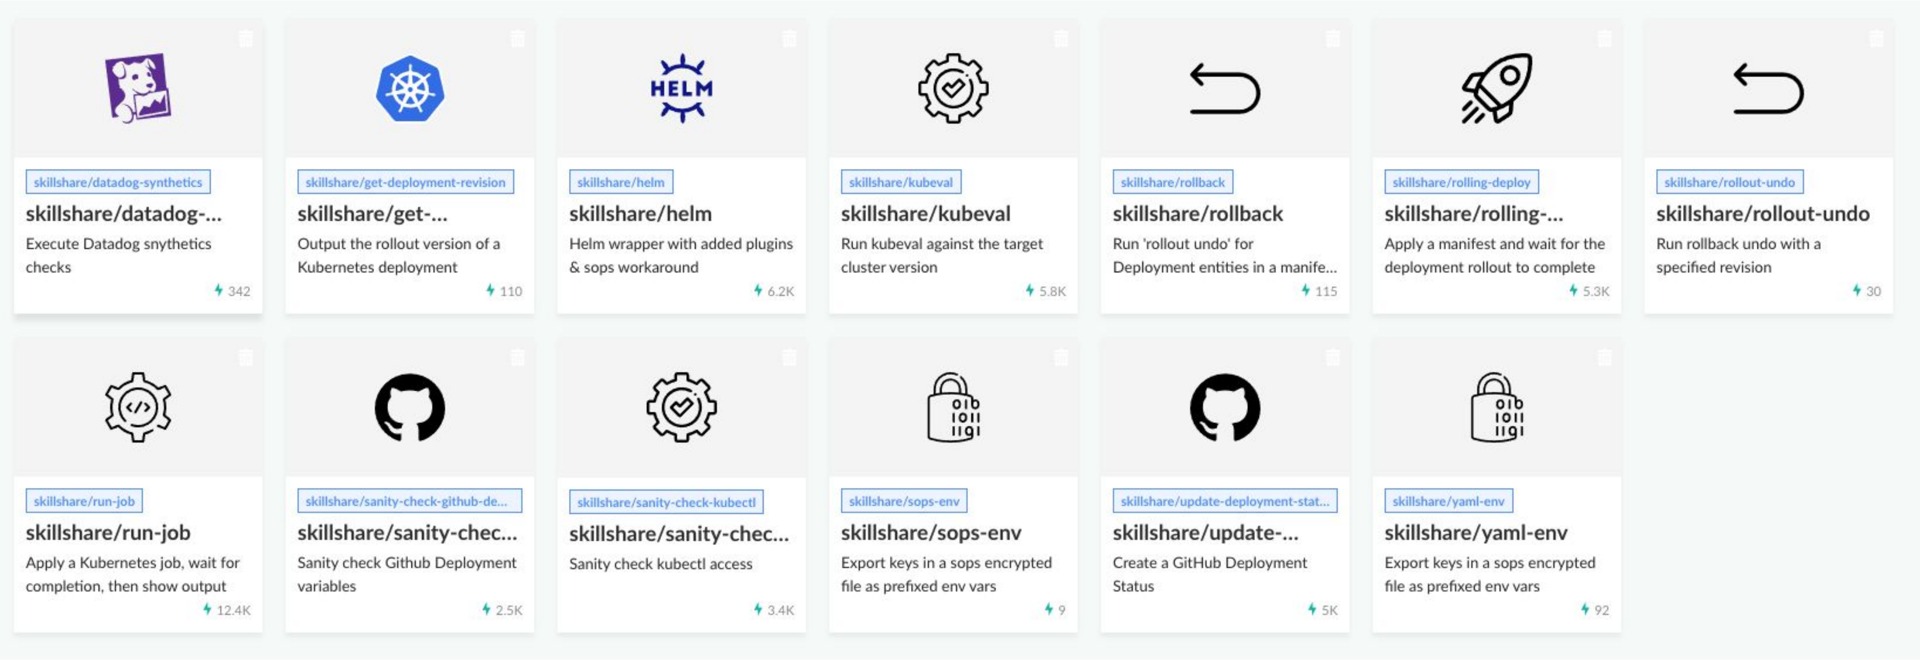
Multi-repo pipeline

Supports our sandbox

3

Extendable

Canaries, DataDog SLI verification, custom steps, we think; we can do it. 🚀



skillshare/datadog-synthetics

skillshare/datadog-...

Execute Datadog synthetics checks

⚡ 342

skillshare/get-deployment-revision

skillshare/get-...

Output the rollout version of a Kubernetes deployment

⚡ 110

skillshare/helm

skillshare/helm

Helm wrapper with added plugins & sops workaround

⚡ 6.2K

skillshare/kubeval

skillshare/kubeval

Run kubeval against the target cluster version

⚡ 5.8K

skillshare/rollback

skillshare/rollback

Run 'rollout undo' for Deployment entities in a manife...

⚡ 115

skillshare/rolling-deploy

skillshare/rolling-...

Apply a manifest and wait for the deployment rollout to complete

⚡ 5.3K

skillshare/rollout-undo

skillshare/rollout-undo

Run rollback undo with a specified revision

⚡ 30

skillshare/run-job

skillshare/run-job

Apply a Kubernetes job, wait for completion, then show output

⚡ 12.4K

skillshare/sanity-check-github-de...

skillshare/sanity-chec...

Sanity check Github Deployment variables

⚡ 2.5K

skillshare/sanity-check-kubectl

skillshare/sanity-chec...

Sanity check kubectl access

⚡ 3.4K

skillshare/sops-env

skillshare/sops-env

Export keys in a sops encrypted file as prefixed env vars

⚡ 9

skillshare/run-job

skillshare/run-job

Apply a Kubernetes job, wait for completion, then show output

Version: **0.1.1** CHANGE

Arguments

- `KUBE_CONTEXT` - Kubernetes context
- `KUBE_NAMESPACE` - Kubernetes namespace
- `MANIFEST_PATH`* - Manifest file containing the Job.
- `TIMEOUT` - How long to wait for the job. Defaut: 5m

```yaml
version: '1.0'
steps:
  preflight_check:
    title: Preflight check
    type: skillshare/run-job
    arguments:
      MANIFEST_PATH: '${{CF_VOLUME_PATH}}/manifesets/preflight_check.yaml'
```

```yaml
version: '1.0'
steps:
  preflight_check:
    title: Preflight check
    type: skillshare/run-job
    arguments:
      MANIFEST_PATH: '${{CF_VOLUME_PATH}}/manifesets/preflight_check.yaml'
      KUBE_NAMESPACE: test
      KUBE_CONTEXT: test-cluster
```

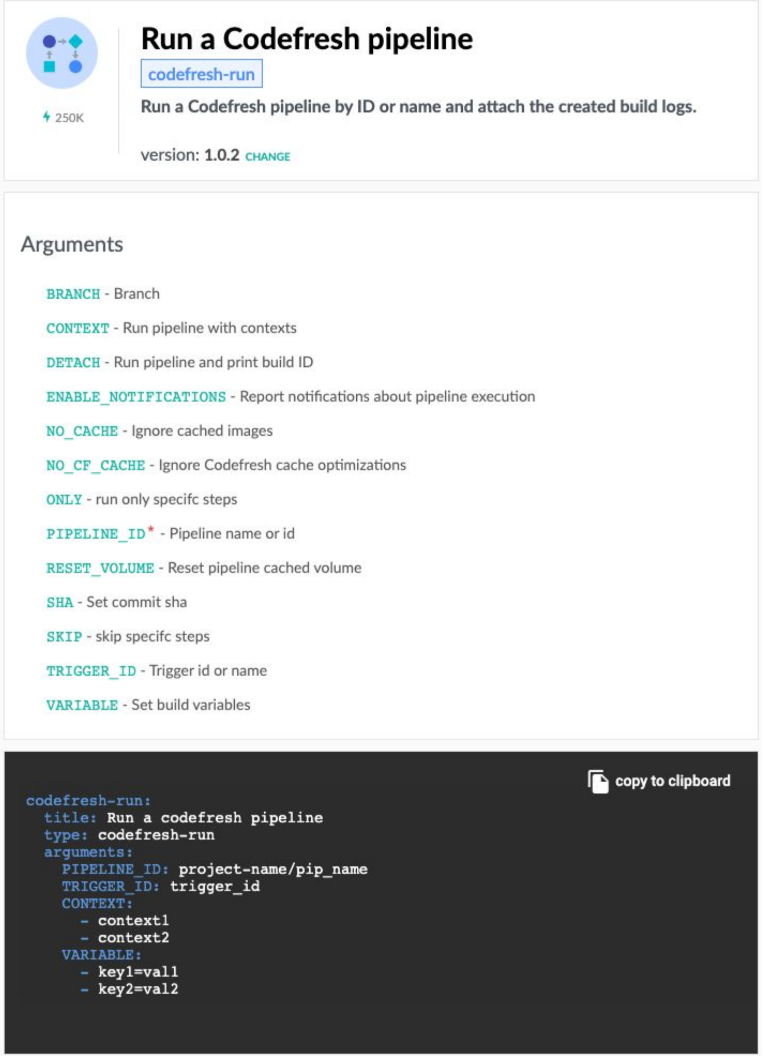
Synthetic Tests
Step type: codefresh-run
1 min 53 s

E2E Tests
Step type: codefresh-run
1 min 47 s

Use pipelines as team APIs. Want e2e tests in our pipeline? Go ahead and add it.

skill share.



Run a Codefresh pipeline

Run a Codefresh pipeline by ID or name and attach the created build logs.

version: 1.0.2 CHANGE

Arguments

- BRANCH - Branch
- CONTEXT - Run pipeline with contexts
- DETACH - Run pipeline and print build ID
- ENABLE_NOTIFICATIONS - Report notifications about pipeline execution
- NO_CACHE - Ignore cached images
- NO_CF_CACHE - Ignore Codefresh cache optimizations
- ONLY - run only specifc steps
- PIPELINE_ID* - Pipeline name or id
- RESET_VOLUME - Reset pipeline cached volume
- SHA - Set commit sha
- SKIP - skip specifc steps
- TRIGGER_ID - Trigger id or name
- VARIABLE - Set build variables

```
codefresh-run:
  title: Run a codefresh pipeline
  type: codefresh-run
  arguments:
    PIPELINE_ID: project-name/pip_name
    TRIGGER_ID: trigger_id
    CONTEXT:
      - context1
      - context2
    VARIABLE:
      - key1=val1
      - key2=val2
```
